AMENDMENT

IN THE SPECIFICATION

Please amend paragraph 16 as follows:

A1
As illustrated in Figure 2, the edges 34 of the dual spherical ball clamp 22 are slightly inclined upwardly with respect to the lower surface 36 of the dual spherical ball clamp 22. Each edge 34 is inclined A degrees from the lower surface 36 of the clamp 22. Preferably, the edges 34 are inclined approximately 75°. The inclined edges 34 allow for additional range of motion of the arms 32 as a smaller angle B can be formed between the arms 32. Each arm 32 has a large range of motion, preferably at least 90°. Additionally, as shown in Figure 2, a portion of the spherical balls 30 are exposed from the sockets 28.
